

MC-700

WARP LEASING MACHINE

MC-700 automatic warp yarn leasing machine, compatible with TODO leasing machine, is used to separate warp yarns into 1:1 or 2:2, especially for the preparation of warp beams for water jet weaving industry. The filament yarns are sized first in sizing machine, and then separated by manual leasing or automatic leasing for easy connection with the old warp beam with the help of the automatic warp knotting machines, such as EZTEX or BQ198.

It adopts a special mechanism to separate the warp yarns to meet the high speed separation work, and the use of positive cam drive ensures stable operation and easy adjustment.

Selector needles for different yarn counts are available and the replacement of such needle is very easy.

ITEM	PARAMETERS
Max working speed	400 rpm
Basic lease condition	1:1 or 2:2
Yarn type	Synthetic, chemical, filament yarn, silk, cotton
Working width	75" 95" 110" 140"
Separation speed control	70-400rpm stepless
Motor	single phase AC100V-50W (with transformer for other voltages)
Number of lease	2-end lease / 3-end lease
Packing dimension	370cm x 100cm x 105 cm (95" machine)
Packing weight	700kgs
